

Product Specification

Ord.-No.: **111 446 / E0683592**

Specification: Prönit, earthing enhancing compound for improve the earth resistance

Performance: Prönit according to DIN EN 62561-7 to be used as a compound to improve the earth resistance.

Prönit – High swellable special concrete to improve and maintain a constant earth impedance.

The earth impedance is positively affected, since it binds water to a high degree, thus forms an conductive coating of the earth electrode.

Type	Powder in bags
Mixing ratio	5 parts sand / 1 part prönit / 0.5 parts water
Note	The amount of water required depends on the quality of the sand
Standard reference	DIN EN 62561-7
Packing unit	25 kg
